Information Technology Committee   April 14, 2016

Is focusing on transferring the Front Desk Functionality into the single integrated Management Control Website Software.

In addition to the previously facilitated communication from the BOD to Owners via "aquariuscondo.net," the new management system will closely follow visitors, guests and renters by registering them on the central data base and enabling Security service properly control all entries. Also, access to Community Documents, Concierge service of packages, Valet Parking, payments to the Association are among services eventually integrated into the on-line central controlled system.

IT Committee recommended selection of one provider out of three proposals. The Contract has been signed, functional specification and data transfer from the old system initiated.

The first, back-bone, implementation could be operational in 2-nd Quarter. This supposed to be timely with the new lobby, requires restored gates control. Security cameras and WI-FI accessibility. The Office employees will have to be properly trained and organized. The task looks ambitious, but we must be able to do it.

Sam Schmuter, Information and Technology Committee Chairperson
